

Soft and flexible – less bedding – greater hygiene

HorseProtect
ComfortStall®

FOR THE BENEFIT OF YOUR HORSE.

ComfortStall® is the best choice for three reasons

ComfortStall® is extremely soft and flexible

ComfortStall® is easy on horses' joints. Thanks to its non-slip surface, the special floor also provides a safe footing as the hooves sink slightly into the padded floor and gain good grip.

ComfortStall® saves 50% bedding

Using ComfortStall® in your stable will mean you require half as much wood-shavings bedding on average. That pays off. Above all, because the special flooring has a life of at least 15 to 20 years.

ComfortStall® features excellent hygiene

The sealed watertight surface of ComfortStall® is easy-to-clean and disinfect. Urea and bacteria do not stand a chance. This will help prevent horses developing respiratory conditions.

ComfortStall® – for healthy horses and hygienic stables

ComfortStall® is extremely soft and flexible

ComfortStall® is easy on horses' joints. Thanks to its non-slip surface, the special floor provides a safe footing as the hooves sink slightly into the padded floor and have a good grip.

ComfortStall® is an all-round talent among special floorings for horse health and better hygiene in stables. The orthopaedic, padded floor for Horse stables and veterinary clinics is easy on the animals' joints and its non-slip surface provides them with safe footing. The easy to clean sealed top coating is watertight – urea, bacteria and ammonia do not stand a chance. Furthermore, the high-quality special floor protects against cold and moisture. And, not least, it saves up to 50 percent bedding.

These numerous plus points make ComfortStall® one of the most versatile floors for stables, intensive-care stalls and equestrian facilities – and a

worthwhile investment. The calculation is quite simple: with a lifetime of 15 to 20 years, you save in the long-run – and in three areas in fact: **Less wood-shavings bedding + less work + less to dispose of = greater convenience.**

The result is the perfect stable floor for customers who set the highest standards for the equipment in their stables and the health of their animals. **Simply the best floor for your horse.**

Many years of experience show: veterinary clinics in the USA and the United Kingdom trust in this special floor. At Cornell University Veterinary Hospital, one of the world's leading university veterinary clinics, more than 1,000 horses recover on ComfortStall® each year. You can be certain: **your horse will be happy, too.**

Why you should use **ComfortStall®**

Improving joint health.

The therapeutic properties of the level surface that springs back with each step ensure better mobility, flexibility and hoof quality thanks to greater support for the joints, tendons and ligaments.

Improved respiratory tract health.

The quality of the stable air is improved considerably due to the sealed and impermeable floor covering that is made from a single piece of Ironclad™ TopCover. It prevents the build-up of urea, bacteria and the resulting harmful gas ammonia.

Prevents hock injuries caused by the floor covering.

Thanks to the anti-slip and hard-wearing surfaces, horses can get up without slipping. When standing up, the horse's hooves sink into the padded floor and gain hold.

Relief for horses that suffer from painful limbs or laminitis symptoms.

The padded floor provides comfortable and supportive cushioning, which encourages the horse to lie down.

Reduces the need for stable wraps.

The elasticity of the padded floor massages the horse's frog and stimulates circulation.

Provides support for the whole body while lying.

The padded floor covering yields in the area of the hips, shoulders and fetlocks when the horse lies down and stands up.

Insulates against the cold.

ComfortStall® protects against the cold and moisture rising from concrete and natural floors.

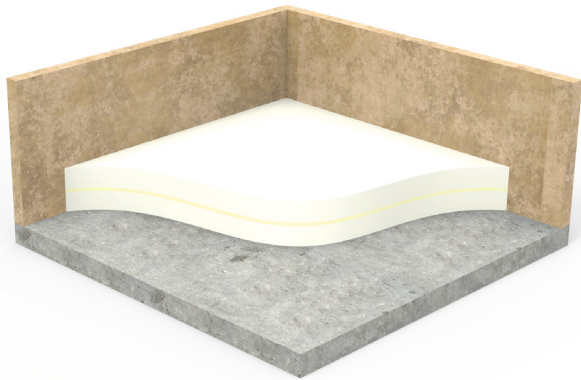

Requires less bedding.

ComfortStall® significantly reduces the need for straw, paper, wood-shavings bedding, wood pellets and other types of bedding to care for the horse – the bedding is only required to absorb excretions.

An investment with returns.

Less bedding*, less time needed to clean out the Horse stable and no maintenance work – all this leads to a considerable reduction in costs and an investment that normally pays off within a year. The average saving in wood-shavings bedding is 75%.

Orthopaedic padding

The core of the ComfortStall® system is formed by the specially developed orthopaedic Precision Foam™ padding with unique elastic and ergonomic properties.

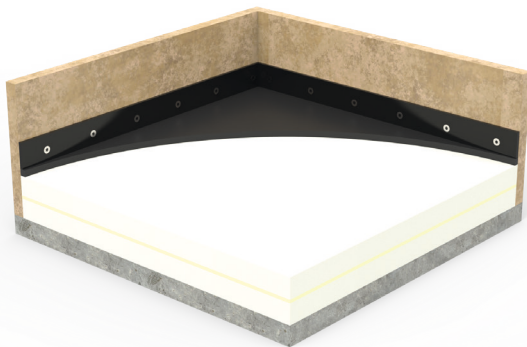

It counteracts the fatigue that many horses suffer from when standing on concrete floors or conventional rubber mats (which are usually only 3% softer than concrete floors).

The padding also protects against cold and heat, is fully waterproof, absorbs vibrations and shocks, and serves to return energy. The chemically cross-linked PE foam is coated for greater structural stability, creating a robust, even surface. Horses leave temporary hoof prints behind when they walk across the ComfortStall® flooring. This shows the cushioning effect and energy return of the flooring.

HDPE fastening strips

The high-density polyethylene (HDPE) fastening strips prevent the IronClad™ covering from slipping and form an impermeable barrier that makes it impossible for urine and other unwanted liquids to seep through into the substrate. This means the flooring system is very easy to clean, disinfect, wash and even hose down.

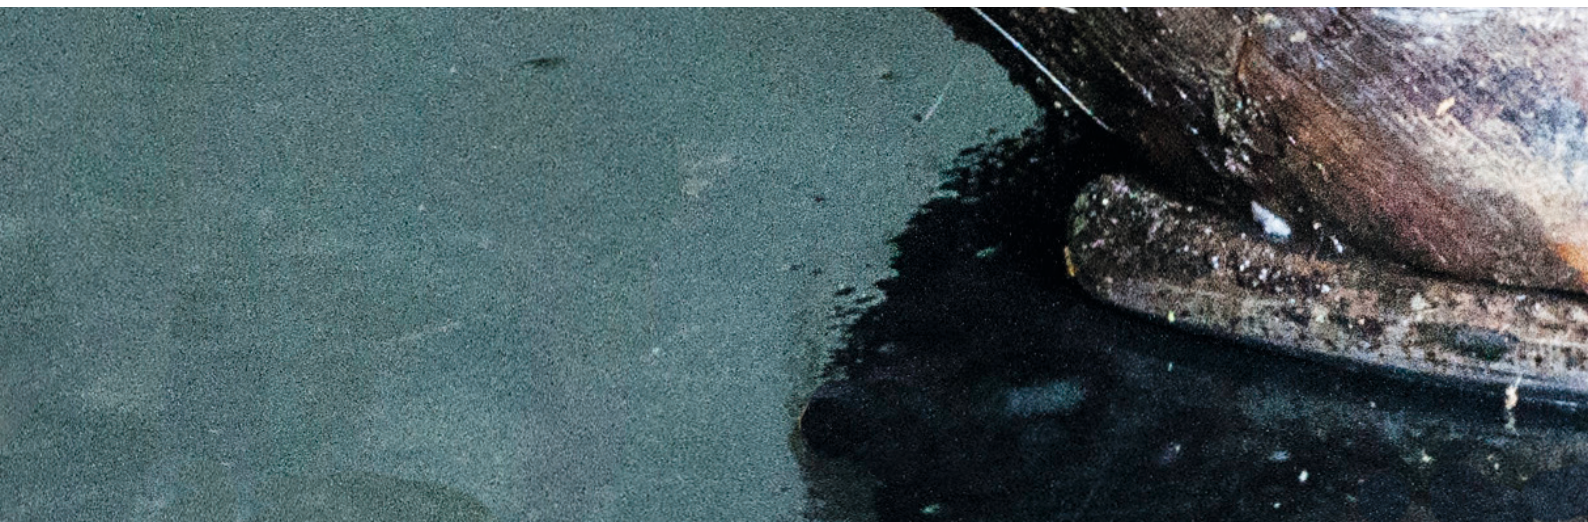

This eliminates the need for time-consuming, continuous care work to remove ammonia and bacteria deposits, as is the case with other types of stable flooring.

IronClad™ TopCover

The IronClad™ TopCover forms the protective layer for the ComfortStall® floor covering. It is flexible enough to maintain the therapeutic benefits of the padding that protects it, but at the same time durable enough to outlast all materials except concrete.

The rubber covering is made from a single piece and consists of five layers: two layers of robust, densely woven polyester-nylon mesh sandwiched between three layers of dense, vulcanised rubber. In this way, the coated and reinforced Ironclad™ TopCover ensures unrivalled structural stability and durability.

Five steps to perfect flooring – with ComfortStall®

Step 1: The unique orthopaedic PrecisionFoam forms the basis for every ComfortStall® stables. Laid precisely by experts, it is this foam that guarantees unmatched elasticity.

Step 2: Careful cuts need to be made at the joins between the floor and wall and around all necessary recesses to ensure that nothing slips out of place later on.

Step 3: For unrestricted comfort, the transitions between the individual, fitted PrecisionFoam sections are then seamlessly fixed in place and drainage points are cut out.

Step 4: To ensure seamless sealing into all corners, the waterproof ComfortStall® top layer is laid from the floor up along the side walls and around the entire stable ...

... and, once the HDPE strips have been fitted, it is sealed along the top of the closing strip. For a floor that your horse will love!

An investment that will pay off over many years.

- ✓ The ComfortStall® floor covering is easy to care for and saves bedding, time and money.
- ✓ Working hours required for mucking out and the quantity of bedding are reduced.
- ✓ Many owners report that their bedding costs have fallen over 50% without affecting lying comfort.
- ✓ The costs will pay off in a short time.
- ✓ Five-year warranty
